

Mohammed Ahmad Ashifa

Email: mdashifa12@gmail.com

LinkedIn | Github | Leetcode

Full Stack AI Engineer focused on building production-grade LLM systems, AI workflows, and real-time applications. Experienced in end-to-end development (React + FastAPI) with a strong foundation in scalable AI system design and deployment.

EDUCATION

- Aditya Engineering College - (2024–Present) | CGPA: 9.07/10
B.Tech in Computer Science & Engineering
- Andhra Polytechnic (2021–2024) | 89.9%
Diploma in Computer Engineering
- St. Joseph's Convent School (2021 batch) | 83%
High School

Skills

Languages: Java, Python, JavaScript, C++, C

Frameworks/Tools: FastAPI, Django, Node.js, React

Core CS: Data Structures & Algorithms, Object Oriented Programming, DBMS, Operating Systems, REST API Design

AI/ML: Natural Language Processing, Deep Learning, Retrieval-Augmented Generation, Transfer Learning, Vector Embeddings

Databases: MongoDB, SQL

DevOps: Git, Docker, Linux

Experience

MERN Stack Developer Intern – Aim Technologies (May–July 2025)

- Developed full-stack MERN applications with REST APIs, authentication, and scalable backend services
- Optimized backend performance and improved system efficiency
- Collaborated in an agile team for debugging, testing, and deployment

Cybersecurity Virtual Experience – Deloitte (Forage)

- Analyzed simulated security breach scenarios to identify vulnerabilities and suspicious activity

Projects

RAG-Based Document Q&A System

- Designed a scalable retrieval pipeline using FAISS/Pinecone handling large-scale document datasets
- Reduced hallucinations by ~30% through optimized retrieval and prompt engineering
- Built modular backend services for efficient query processing and response generation

Real-Time Sentiment Analysis Dashboard

- Built a **real-time sentiment analysis system** using LSTM and transformer models with ~90% accuracy
- Developed a **live dashboard with streaming data pipelines** for low-latency visualization and insights

LLM-Powered Prompt Router for Intent Classification

- Developed an **LLM-based intent routing system** to dynamically dispatch queries across multi-step AI workflows
- Designed **few-shot and structured prompts** to improve classification accuracy and reduce unnecessary LLM calls

Semantic Document Search Engine

- Engineered a **semantic search system using vector embeddings** for context-aware document retrieval
- Implemented efficient indexing and similarity search for **highly relevant results across large datasets**

Achievements

- Solved 250+ DSA problems on LeetCode
- NPTEL IoT - Elite + Gold (90%)
- Completed LinkedIn certifications in NLP, Deep Learning, AI
